

PROJECT OVERVIEW

OFFICE FURNITURE MADE IN ITALY

We are an Italian office furniture company that produces valuable content, high-quality pieces with a distinctive design that is immediately recognizable.

Our commitment is to create comfortable and functional products, designed to make the workplace a more practical and pleasant environment, without adding unnecessary or whimsical details.

Practical, solid and beautiful: our products come from the long tradition of craftsmanship that has brought great success to “Made in Italy” goods, together with constant innovation in manufacturing and industry.

Siamo un'azienda italiana che produce arredamenti per ufficio di grande valore progettuale e di elevato livello qualitativo, con un design del tutto particolare ed immediatamente riconoscibile.

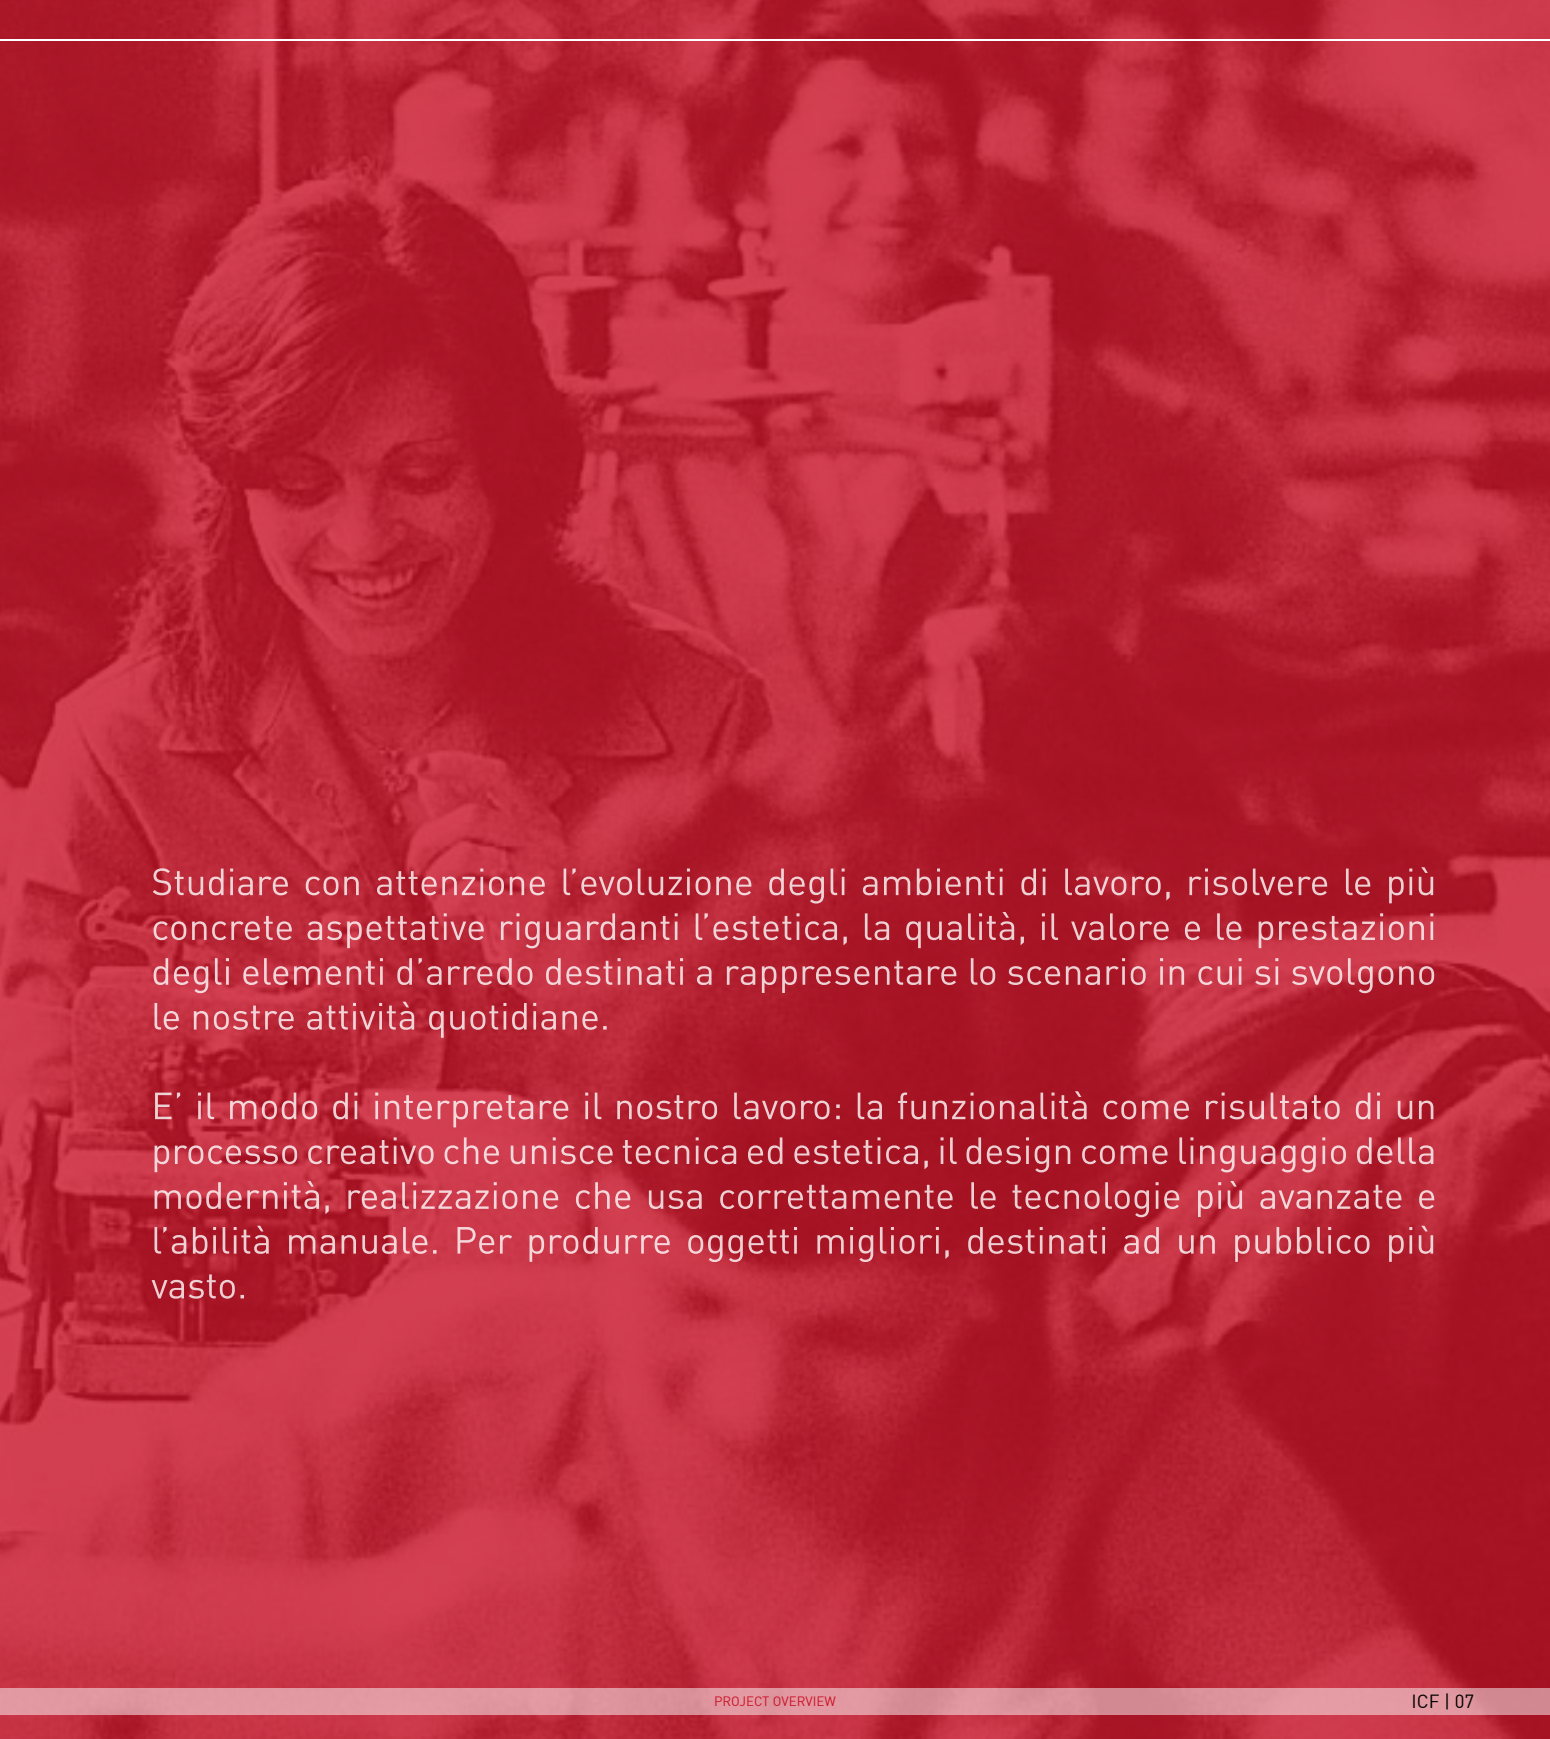

Uno dei nostri principali obiettivi è realizzare prodotti confortevoli e funzionali, capaci di rendere più pratico e piacevole l'ambiente di lavoro, eliminando tutto ciò che è superfluo.

Concreti, solidi e belli: i nostri prodotti sono frutto della lunga tradizione artigianale che ha reso grande il "Made in Italy", unita a una costante innovazione produttiva e industriale.

WITH LOVE AND PASSION

We carefully study workplace evolution and solve the more tangible problems regarding aesthetics, quality, value and performance of the furnishings destined to become the landscape of our daily activities.

This is our way of interpreting our work: functionality becomes the result of a creative process that fuses technical aspects and aesthetics, while design is the language of modern culture, a creation process that correctly implements the most advanced technologies and manual skills. To produce the best items, destined for a larger public.

A woman with dark hair, smiling, is working on a piece of furniture in a workshop. She is wearing a dark jacket. In the background, another person is visible, also working. The scene is set in a workshop with various tools and materials.

Studiare con attenzione l'evoluzione degli ambienti di lavoro, risolvere le più concrete aspettative riguardanti l'estetica, la qualità, il valore e le prestazioni degli elementi d'arredo destinati a rappresentare lo scenario in cui si svolgono le nostre attività quotidiane.

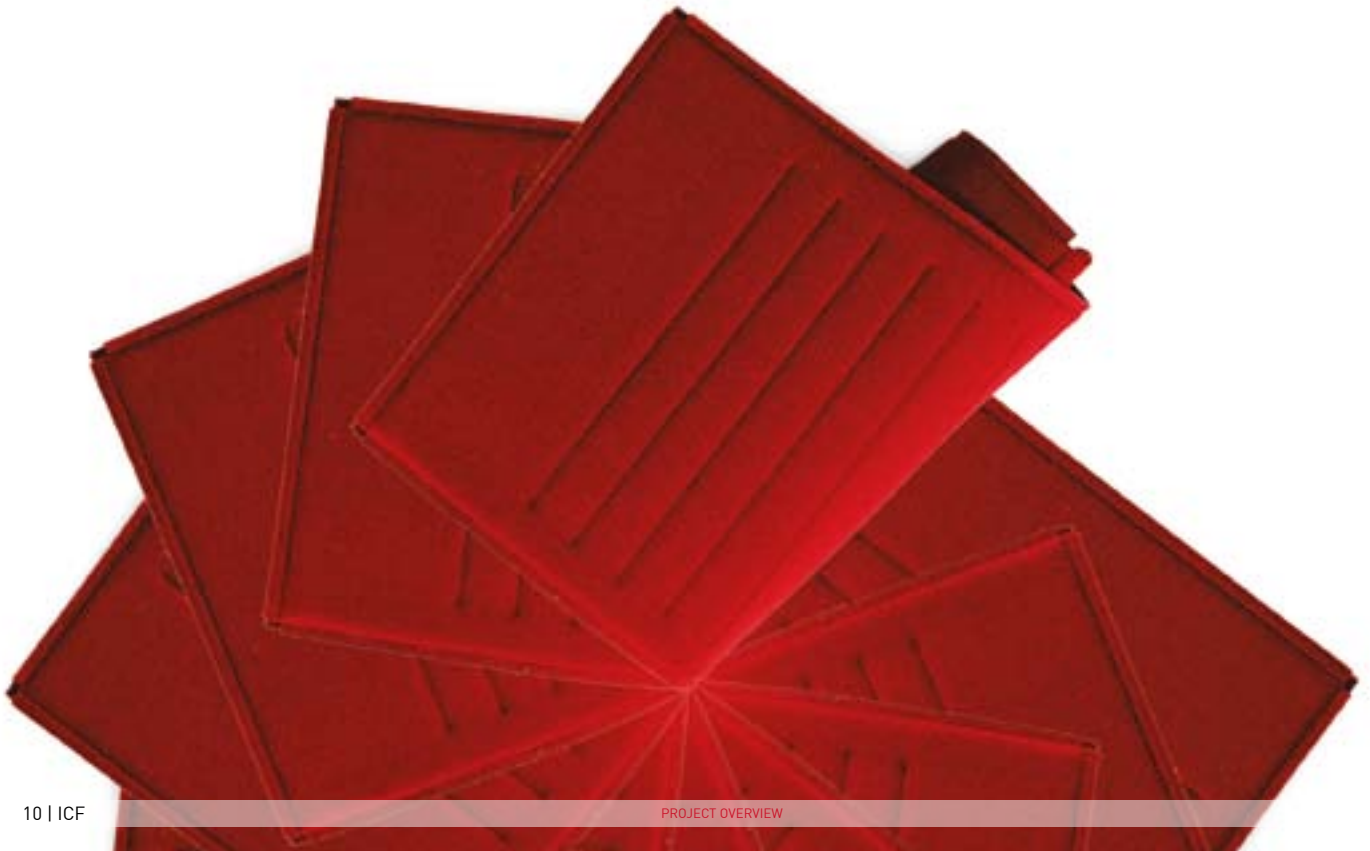

E' il modo di interpretare il nostro lavoro: la funzionalità come risultato di un processo creativo che unisce tecnica ed estetica, il design come linguaggio della modernità, realizzazione che usa correttamente le tecnologie più avanzate e l'abilità manuale. Per produrre oggetti migliori, destinati ad un pubblico più vasto.

WE BELIVE IN DESIGN AND RESEARCH

We believe in design and research as corporate values and not as purely formal facts.

We are convinced that creativeness can be achieved continuously working on every detail, solving technical and production problems.

This is the only way to turn an idea into something tangible, like an object that can make our lives easier.

Crediamo nel design e nella ricerca come valori aziendali di riferimento e non solo un puro fatto formale.

Siamo convinti che la creatività si realizzi lavorando continuamente su ogni dettaglio risolvendo i problemi tecnici e produttivi.

Solo così un'idea diventa qualcosa di concreto, un oggetto che ci rende più agevole lo svolgimento delle nostre attività quotidiane.

A COLLECTION OF OBJECTS AND SYSTEMS

Our guiding concept is that of a continuously developing collection.

In other words, we do not strive for a complete set of furnishings, but a series of individual pieces that have the same personality despite their differences.

These pieces can be bought separately, but always go together. They are designed with a specific purpose, but not in a way that is so precisely defined that they cannot be used in different settings. The pieces have a range of multiple uses that conform to the trend of modern architecture toward eliminating traditional classifications and uses. It's an open collection that does not necessarily increase in quantity, but above all aims at achieving excellence in form and function. A solid collection created with care.

Il concetto cui ci ispiriamo si basa sul continuo sviluppo di una collezione.

Non arredamento completo, ma una sequenza di singoli pezzi aventi un carattere uniforme malgrado la loro diversità.

Pezzi che si possono acquistare anche singolarmente ma sempre armonizzanti tra loro. Pezzi disegnati per uno scopo preciso ma non così definito da non poter servire in altro ambiente. Pezzi di molteplici uso, corrispondenti alle tendenze dell'architettura moderna di eliminare le tradizionali classificazioni ed utilizzazioni. Una collezione aperta che non dovrà necessariamente aumentare di quantità ma tendere anzitutto all'eccellenza formale e funzionale. Una collezione stabile creata con cura.

WE CREATE WITH
YOU A VISION
FOR INNOVATIVE
PRODUCT

To make a good product we need a good plan. We have to listen to the needs of our customers and gear our vision of the scheme to the actual daily needs.

Our designing ability is a direct consequence of the requirements of the customers and the experience we gather through the projects we carry out every day.

The project is developed on the basis of creative, executive and economic needs. ICF can supply strong support through CAD, 2-3D models.

Later, a planning space is set up in collaboration with our Technical Office so that we can have precise indications on finishes, materials, timing and costs.

Per realizzare un buon prodotto è necessario saper fare un buon progetto. Saper ascoltare le esigenze dei nostri clienti ed adeguare la nostra visione progettuale alle reali esigenze quotidiane.

La nostra capacità progettuale è una diretta conseguenza delle richieste dei nostri clienti e dell'esperienza che accumuliamo nei progetti che quotidianamente realizziamo.

Lo sviluppo del progetto avviene sulla base delle esigenze creative, esecutive ed economiche. ICF è in grado di fornire supporti concreti mediante sistemi CAD, modelli 2-3D e, successivamente, la realizzazione di uno space planning in collaborazione con il nostro Ufficio Tecnico, in modo da avere indicazioni precise su finiture e materiali, tempi e costi.

WE CAREFULLY
CONTROL
EVERY STEP OF
PRODUCTION

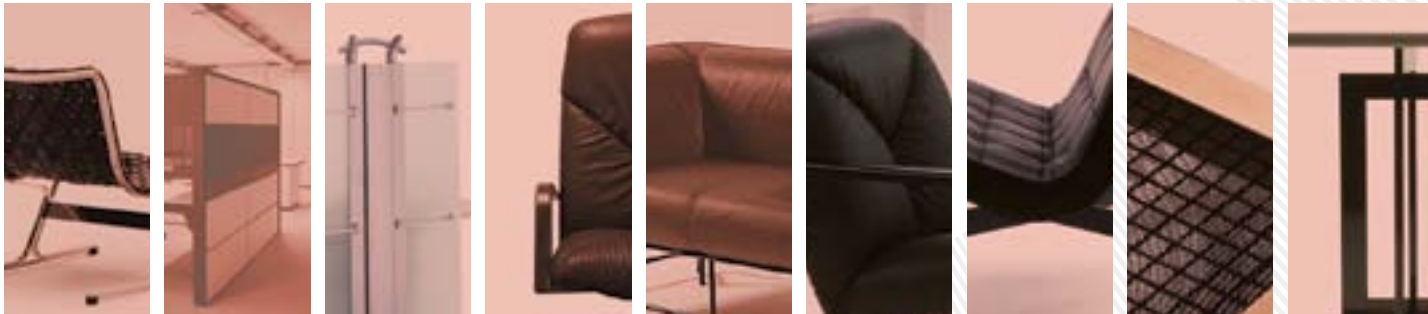

We are an industrial company with deep roots in Italy and a way of interpreting industrial products and relating to people that is typical of the finest traditions of our country. Our product line is exceptionally complete and is supported by a production chain that includes the finest Italian and international suppliers to ensure that our products offer the very highest quality. Since we have gained vast experience with the production chain, we can carefully coordinate all phases of manufacturing and check each step in the production process.

Siamo una realtà industriale fortemente radicata nel territorio italiano, con un modo di interpretare un prodotto industriale ed un modo di relazionarci tipici delle migliori tradizioni del nostro paese. La nostra produzione è molto articolata e supportata da un ciclo produttivo che si avvale della collaborazione dei migliori fornitori italiani ed internazionali per garantire la massima qualità dei manufatti. Abbiamo sviluppato una grande esperienza nella gestione della filiera produttiva coordinando tutte le fasi della lavorazione e controllando attentamente ogni passaggio.

 1986 Brick System

Our company opened in Italy in the 1950s, and was known for its passion and research right from the start: we belong to that group of companies that, at the time, were making a significant contribution to creating and establishing the concept of Italian design.

Our product offer has always been decisively innovative: we were the first in Italy to produce partition walls (Programma Interparete, 1965) or walls and panel systems for open spaces (Brick System, 1970, 1982/3).

A trend of product innovation has marked our past, and continues to be evident in our present.

La nostra attività è iniziata in Italia negli anni '50 e si è subito caratterizzata per la passione per la ricerca: siamo tra le aziende che, in quegli anni, hanno dato un contributo significativo alla nascita e all'affermazione del design italiano.

Da sempre la nostra proposta di prodotto è decisamente innovativa: siamo stati i primi in Italia a produrre le pareti divisorie (Programma Interparete, 1965) o sistemi di parete attrezzate e divisorie gli open space (Brick System 1970, 1982/3).

Una tendenza all'innovazione di prodotto che caratterizza la nostra storia ma anche la nostra attualità.
